

Passenger Mars Ticket

Web 3.0 Booking and Travel Mechanism

Whitepaper
Contact: Info@pmttoken.io

Abstract

Innovation in technology has been a tremendous break-through in the past decades. Especially with the development of smartphones, which has contributed to the thriving evolution of websites and online applications. Online payments have become popular and widely applied, but still encountered inadequacies between different currencies used by each country. The currency has been gradually asserting its position when enormous enterprises such as Microstrategy, Tesla, Galaxy Digital, etc., invested in and legalized the products purchased by cryptocurrency.

What do you think about the idea of using cryptocurrency?

online payments on all Online reservation platforms, online betting, and gambling applications? What do you think about the Digital Platform investment idea, where we can buy, sell and receive profits with virtual currencies? Asia in general and China, Japan, Korea, Thailand, Vietnam, and Cambodia, in particular, is a massive market facing many dilemmas caused by the above intricacies. Therefore, **PASSENGER MARS TICKET** was created to enforce the above ideas. We are building not just a crypto coin but a community, an ecosystem to develop online payment and reservation platforms to the next level. PMT wants to build an empire where we can resolve all the blemishes in Online reservation platforms in inadequate countries like

Japan; strict regulations in gambling, and online betting in Asian countries. We are also building a Digital Platform ecosystem for an Online reservation platforms channel that still operates mainly by offline direct merchandising.

In some countries like Japan, Europe Reservation platforms are greatly grown, nevertheless, the drawbacks of payment obstacles have not been solved yet. Typically as when paying for international stall owners, only direct payment is application livable. This creates many complexities for foreigners who want to buy or book Tickets for Cars and hostels. Passenger Mars Ticket has been developed to be a partner with reservation platforms and to become the payment currency for stall owners.

In Asian countries, online reservation and digital platforms are currently illegal, but it is still possible to believe in changing regulations in the future. PMT will replace the current currencies to become the authorized currency used in online reservation applications. Users will no longer have to go through many conversion procedures and can directly transfer/withdraw PMT from their wallet to the in-application wallet and vice versa.

In terms of the reservation field, PMT will be an alternative to the current currency for online ticket payment. The PMT team will develop an application on which investors can use nm to PMT buy Tickets. You will not need to spend a large amount of cash to invest in these platforms, our application will divide the reservation into small investment packages, you just need to participate in the investment by buying a part of PMT products through these packages. Investors will enjoy double profits from the increase in the price of PMT token.

Summary

The goal of PMT is to build a new payment service system that can improve the problems of high fees and long settlement cycles for reservations in the New Metaverse Era, which were structurally inevitable in the existing payment system. We will provide a new solution for fees and settlement cycles by utilizing blockchain smart contracts and crypto-economy to replace various intermediaries in the existing payment system.

PMT is a blockchain payment service project that provides incentives and rewards to all participants, and provides a convenient payment service platform for merchants and users through the app, thereby facilitating interaction between users and liquidity of digital assets.

Introduction

It has been 13 years since Bitcoin, the first digital asset, appeared in the world. The value of Bitcoin has gradually risen from \$20 during the 2013 Cyprus crisis to \$5,700, but it is still not established as a payment method that can replace liquor.

On the other hand, due to the popularization of credit cards worldwide, the expansion of Internet/mobile banking, and the expansion of e-commerce and digital economies, the scale of online and offline payments are increasingly expanding across regions and borders, requiring the development of new payment solutions.

There are other reasons why a new payment system is needed. Still, many people in the world do not have bank accounts either because of structural problems or because of geographic problems. For example, more than 90% of Pakistanis do not have a bank account. (1) Women are not allowed to open bank accounts in Afghanistan. As such, solving the chronic problems of modern society is the goal that the creators of digital assets wanted to achieve, and although it has a very sublime meaning, it has not yet been applied in the real world.

Introduction

Digital assets are being proposed as an alternative to solving the problems of the existing payment structure at a time when the digital economy between countries is expanding.

Previous digital asset-based payment solutions have undergone a lot of trial and error, so an in-depth approach to the following is required to settle into the real economy.

- 1) High price volatility of digital assets
- 2) Lack of a performance system that the general public can easily participate in
- 3) The complex and difficult user experience of digital assets and the high difficulty learning curve
- 4) Physical limitations on the introduction of blockchain payment in the traditional offline payment market

Vision, mission & strategy

Vision

Passenger Mars Ticket (PMT) supports and takes part in the ongoing evolution and rise of crypto around the world. We believe that the future of all financial outcomes will be in some way influenced by these digital coins.

Mission

Passenger Mars Ticket (PMT) uses Blockchain technology to provide financial security, flexibility, and capital growth to all our investors through our PMT. Our risk-adjusted market neutral fund strategy helps achieve abnormal, absolute returns for investors well before the launch or completion of any given project. This asset-backed component of our PMT allows investors to benefit from both intrinsic and extrinsic value creation.

Introduction

The 2017 frenzy surrounding Initial Coin Offerings demonstrated how blockchain technology can empower both ordinary investors and businesses seeking to acquire funding. Simultaneously, ICOs have shown the importance of more dependable quality assurance and secondary-market liquidity guarantees to promote more sustainable means of blockchain-based financing. To that aim, Initial Exchange Offerings (IEOs) and Initial DEX Offerings (IDOs) have been developed to enhance previous fundraising procedures.

What exactly is an IEO?

As the name implies, an Initial Exchange Offering takes place on the platform of a cryptocurrency exchange. In contrast to Initial Coin Offerings (ICOs), an IEO is managed by a cryptocurrency exchange on behalf of the business to generate capital by selling newly issued tokens. As the token sale takes place on the exchange's platform, token issuers are charged a listing fee in addition to a percentage of the tokens sold during the IEO. In return, the exchange sells the crypto companies' tokens on their platform and lists their currency when the IEO concludes.

Due to the cryptocurrency exchange receiving a portion of the tokens sold by the business, the exchange is also rewarded for assisting the token issuer with marketing activities. Participants in an IEO do not contribute to a smart contract, as is the case with an ICO. Customers must instead register an account on the exchange's platform, which hosts the IEO. Contributors then deposit coins into their exchange wallets and utilise those monies to purchase the fundraising company's tokens.

The Emergence of Initial Coin Offerings

IEOs were established in early 2019 and have since grown in popularity to launch new cryptocurrency ventures. An IEO entails issuing new crypto tokens to a select group of investors, or the general public as per an ICO. However, in an IEO, the group seeking funding must collaborate with a cryptocurrency exchange that facilitates token sale and distribution.

IEOs provides several significant advantages for fundraisers and investors alike:

Credibility

Because crypto exchanges are required to do some amount of due diligence before partnering on an IEO (and, as many argue, because they have a vested interest in conducting quality control for their clients), this procedure frequently adds a degree of legitimacy to the associated fundraising. Numerous analysts argue that IEOs are less dangerous than outright ICOs, which sometimes involve consumers visiting unvetted project websites and syncing their wallets using unaudited protocols.

Reach

With an IEO taking place on an exchange, the fundraiser may utilise the exchange's current user base. As a result, the fundraiser can quickly acquire a following by selling and giving tokens to this community. With so many new cryptocurrency projects emerging each week, it may be challenging for a blockchain business to successfully advertise itself across many platforms and grow a significant audience from scratch. Consequently, several crypto projects build IEOs specifically to exploit their target exchange's user base.

Liquidity

When an exchange helps a project's initial coin offering, this is typically a clear indicator that the exchange intends to list the token on its platform, either immediately following the IEO's debut or soon after. Therefore, investors often do not need to move newly acquired tokens to another platform or wallet, nor do they need to spend time searching for a marketplace that actively supports these tokens.

Introduction to cryptocurrency

PASSENGER MARS TICKET

PASSENGER MARS TICKET

The technological advancement and digital revolution have taken the human race into a sophisticated era where things like shopping, communication and reservations could be made through a few clicks. Therefore, owing to this revolution, numerous digital currency platforms have been introduced in the last decade that aim to digitalize the payment systems without involving any third parties. The currencies follow the blockchain and token systems to generate the money and then the money is transferred or it can be used for assigned purposes through a few clicks that does not involve the bank involvement. While, the individual enjoys full control on their money and how they can use it at times.

PMT's management team has a best-in-class understanding of how to plan the growth of its crypto coin. The team aims to ensure consistent, stable value growth of the PMT Coin irrespective of wider market performance. In time, PMT plans to pay a quarterly dividend to all token holders should they decide to hold on to their coins. This will see the PMT become a yielding crypto asset.

HOW PASSANGER MARS TICKET WORKS

PMT has introduced its tokens to target the reservation problems like shortage of currency at the destination country, high reservation commissions, and long payment verification procedures.

PMT is a web 3.0 booking and travel mechanism that will issue the token to interested clients. The money will be kept in the client's vaults but unlike banks, the client will enjoy full control of their transitions and the way they need to send or withdraw their money. For example, due to PMT's partnership with different transport companies, the money can be used to book the rides from hotels or the client can hire the cars and drivers directly from pattered companies. Meanwhile, in the case of hotel reservations, the currency could be used to make the reservations in advance or on the spot through a simple procedure in which the client will follow the following steps.

First, the client will check the hotels and transport services in the destination country. In a second step the reservation request will be sent. Third, in payment method, the client can enter their token's vault number and after clicking the yes, the required amount will be deducted from the token's amount. In the last step the amount will be sent to the banks or rent a car services account that will complete the reservation process.

So, this whole process will work without wasting time in the future and the digitalization of currency through PMT will change the future of tourists, the future of booking and the future of tickets as the client will be offered full control of bookings, service packages, and other needs before traveling only with PMT. Thus, this process will ultimately smoothed the booking ways by eliminating the brokers and bank's role.

MetaVerse

Metaverse Virtual Universe which supports Constantly Online 3D Virtual Platforms via virtual and augmented reality devices besides traditional PCs is a hypothetical repetition of the Internet. The Metaverse provides human cognition to integrate into an artificial physical platform thanks to computers, android devices, and 3D devices. It is possible to describe Metaverse as a cyber-social platform, on which various technologies are integrated and used simultaneously, offering a new reality, a semantic world, and cooperation opportunities through communication perspective and also offering a base and interaction chances for cultural, intellectual, and economical production.

Today, one of the most important metaverse investors in the world is Facebook which has bought Oculus Company, working on virtual reality devices, for 2 billion dollars. However, Facebook has signed partnership agreements in this sector with important software companies like Microsoft. Game platforms like Roblox are also making great r&d investments in this sector.

The Metaverse pledges to create a virtual public field. Virtual currencies of this public field are already traded in the cryptocurrency market today. In this respect, "The Metaverse" concept is regarded as the future of the Internet. The first city to access this artificial universe called "Metaverse" is Seoul city. Even famous rapper Travis Scott has organized a virtual concert on the metaverse stage on the Fortnite platform in 2020.

When this technology has grown enough, people will get the opportunity to do many actions, without any physical effort, such as going shopping, going to the cinema, or spending time in a café by means of Virtual Reality(VR) devices they acquired.

What is Metaverse?

Answers to Startups Innovating New Technologies In answer to the question of what Metaverse is, they refer to it as the development of a three-dimensional world and its combination with the physical world. This means that we have access to all webinars and video conferencing, 3D digital lozenges, digital currency exchanges, data and email file transfers, social media, virtual reality, and online streaming. Meanwhile, the experts and elites of the Metaverse world are looking to coordinate all the digital effects with each other.

Many experts in the world of the technology believe that the future will be social and human interactions.

We are witnessing large investments in supporting the world of Metaverse, for example, we can name the big and famous Facebook company as a big supporter of Metaverse. Such investments promise us a huge leap in the virtual world. Interesting things are going to happen in Metaverse.

We can be the pamphlet of the first generation to align ourselves with the new revolution for the progress of humanity. The pmt team provides the infrastructure to support the shared virtual world. Which is developing and progressing dramatically.

With pmt digital currency, we intend to take a big step for easy and enjoyable access to the world of Metaverse. We intend to use the issued currency to easily connect all users who intend to operate in the world of Metaverse with this pmt digital currency with the world of Metaverse.

Users can transact with pmt currency to buy concert tickets.

We have provided the infrastructure for pmt digital currency so that our users can book concert tickets, buy land, and ...

In the world of Metaverse

Conduct their transactions easily in a safe and secure environment.

Great decision

To cover the pmt tourism industry, it has entered the global digital currency market.

With the cooperation of hotels and leisure centers and booking airline ticket offices, we will solve the problem of converting different currencies into an independent currency with the acronym pmt.

This was a big goal that became a big decision of our team so that we could support the users on the trip.

By installing advanced devices, we intend that users anywhere in the world can easily convert their pmt tokens into the currency of any country.

This will eliminate all travel worries, and tourists will no longer have to go to exchange offices, pay commissions, and waste time.

Our action will pave the way for the development and targeting of digital currencies.

We anticipate that the pmt currency will have a colorful presence in the daily trading queue of all the digital platforms of the world due to the high reception of tourists and travelers.

We also plan to make transactions with bank cards, master cards, and visas to facilitate users' transactions.

Also, shortly, we will provide an independent and stable banking portal for the website so that dear customers can do their transactions on the pmt website safely and efficiently without needing to visit exchange offices and banking sites other than the pmt website.

WEB 3.0

Web 3.0, Web3 is an idea for the Internet whose version is decentralized and based on general blockchains. The concept has gained popularity with the interest of cryptocurrency supporters and with investments of high-profile technology experts and their companies between 2020 and 2021. Let's have a look at Web1.0 And Web2.0 in order to understand Web 3.0 more accurately.

Web3 revolves around an Internet idea that is decentralized. Its advocates generally compares it with Web 2.0 in which the macro-scale of web data and content is centralized in a quite micro-scale group of companies.

Visions which are specific for Web3 are distinctive but they all are mostly based on Blockchain Technologies such as various cryptocurrencies and NFTs. Some visions are based on the DAO concept which is a decentralized, self-regulating organization that tries to help many people have equal possession and governance. Decentralized Finance (Defi) is another concept in which users transact money without a bank or governmental intervention. The Self-sovereign Identity makes it possible for users to authenticate their identities without allowing centralised authentication system like OAuth.

PMT Signing Contracts

Contracts are agreements made between two or more parties, used to lay out specific terms and bind each party to those terms.

To create a valid contract, it's generally best for a document to be produced in writing, and this is necessary for contract law for some agreements, such as those involving the sale of real estate, reservations, and e-commerce. It should then be signed by each relevant party as a symbol of their acceptance of the terms of the contract. This record of acceptance is extremely important when it comes to securing any payment specified by the contract, or resolving any disputes that may arise during the agreement.

Passenger Mars Token offers a great contract to all investors and token holders for the betterment of this project and for the future of metaverse.

PMT has great plans to work with their investors and different companies and banks on legal contracts to build ATMs for airports that can be exchanged with the money of that country where you are living.

Blockchain-based Payment Solution

PMT is a fast and inexpensive end-to-end payment platform that improves the inefficiency of the existing payment system through blockchain-based smart contracts and its own coin economy ecosystem.

In order to improve the inefficiency of the existing payment structure and build a platform to secure users, the following should be considered. First, it should be possible to implement a platform with good payment processing speed and good accessibility.

Although it is a low payment fee, it is inconvenient for users to use, and if there is inconvenience due to the long waiting time for each payment, the merchant has no choice but to consider introducing a new system.

Second, in order for Online Digital centers, Reservations, and affiliates to accept digital assets as a payment method, it is necessary to fully consider the volatility problem of digital assets. Existing digital asset-based payment solutions have undergone a lot of trial and error, so it is necessary to present a model that can be used as a payment method by merchants and consumers and can flexibly cope with volatility.

Third, operators of various industries and companies, including platform users, should be able to provide scalability that can freely apply promotions and policies according to the characteristics of each company, and convenience optimized for both on/offline payments in real life. Accordingly, PMT intends to present a platform model that can flexibly cope with volatility through its own coin economy ecosystem and is convenient for on/offline payments.

Payment Service Model

Passenger Mars Token provides a blockchain-based integrated payment service so that network users can use P2P remittance and payment, and merchant simple payment functions more cheaply and efficiently through easy payment apps (iOS, Android).

In the case of PMT's payment function, the network will receive 0.2% of PMT Tokens paid by users as payment fees, and the remaining 99.8% will be sent to merchants.

This has the advantage of not only allowing merchants to expect greater operating profits but also easily securing liquidity due to rapid settlement because the payment service can be used at a lower fee than the existing payment fee.

In addition, a certain amount of payment fees received as network fees are compensated to PMT users (buyers, sellers) in the form of rewards. This will be paid as compensation to users in various ways, such as promotions such as a 5% additional discount when paying, and user fees so that they can be returned and used in the PMT economy.

In the case of the P2P remittance function provided by PMT, the sender pays a 0.05% fee to the network and sends 100% of the amount to be remitted to the recipient. And the fee received by PMT is paid as a reward for verification and creation of blocks and users who use the network payment function and remittance function.

PMT Marketplace

Passenger Mars Ticket will also provide individual users with PMT token transactions and cross-currency transactions using the marketplace so that all users can instantly trade points and digital assets with minimal fees.

Fees received through marketplace transactions are used to compensate users for using the platform and to maintain and repair services.

In addition, to use the marketplace, you can directly pay the fee with PMT, or you can use the service by selecting PMT automatic conversion payment. In addition, if there are coupons or loyalty points issued by PMT's platform providers, peers, merchants, etc., users can use the platform more efficiently by expanding the use of points within the platform or enabling P2P transactions between users in the marketplace, can easily buy Tickets and use it to book Tickets, Hotel dues It will provide a degree of freedom to use the points of.

PMT Launchpad

Start-up projects in any industry are very vulnerable because they do not have the right orientation and resources. Hence, Binance Launchpad was created to help promote these projects. The Launchpad provides exactly the resources needed for a fledgling project. This gives the project an opportunity to present its idea to 10 million potential users and investors. Binance claims that the process of selecting projects that can use the launchpad is very carefully designed, but they do not specify what they mean. Some of the rules that launchpad binance considers are:

- Reaching relative development of projects
- Preparation for large-scale acceptance and implementation
- A strong and committed team of founders and developers
- The potential for growth and development in a wider ecosystem

PMT Wallet

PMT is a decentralized Binance Smart chain & Ethereum-based on Web3 Mobile Wallet. The app works with several crypto tokens and blockchain wallets. It enables users to store, send and receive Smart Chain & Ethereum-based tokens on the go. These functions are designed with a focus on user experience, providing a full suite of features for naive and seasoned enthusiasts. PMT Wallet offers a seamless user experience. As we believe that ease of use is vital in the adoption of cryptocurrencies, the highly intuitive and user-friendly mobile application for accessing the blockchain.

PMT Wallet Application works with several crypto tokens and blockchain wallets. Enabling users to store, send and receive Ethereum and Smart Chain-based tokens with ease.

A few important features are described below.

Great Token Experience:

Enjoyanative - experience with TokenScript enabled tokens. Store and manage features-PMT NFT Tokens, game tokens, and ENS, along with your ETH and BSC currencies.

User-Friendly UI:

Beginner-friendly with no hidden fees or tech background needed. Just launch the app create your wallet and start interacting with the blockchain.

Use Cases of PMT Token

Investors can tokenise their PMT for the following purposes:

Payment for :

- **Our Vision**

Our vision is to digitalized the hotel and rent a car services through e-tokens

- **Business Aim**

PMT aims to enable people to book everything before they travel, such as taxis, car rentals, hotels and everything.

- **Future Plan**

In the future we want to install such ATMs at airports that can convert client's token into the

Encoding

Purpose: In addition to rewarding ecosystem contributors, the goal of the cryptocurrency in the PMT system is not only to ensure that those using the platform always feel like they are more than just customers, but also the shareholder that makes Passenger Mars Ticket successful.

Not only that, but as the ecosystem grows, the PMT cryptocurrency will encourage believers to continue choosing to participate in the community. This participation will ensure that any services added to our ecosystem receive incentives.

The idea of Passenger Mars Ticket Token

PMT is rooted in the limitations of current Reservation and digital Online platforms.

This concept has spurred development into the idea of creating an ecosystem to solve, driving the growth of the 5.0 era.

The era when cryptocurrencies will gradually replace existing currencies and be widely used in life by the world.

The concept of this entire ecosystem has been developed to perfect the original concept by creating a cryptocurrency using the Binance Smart Chain Blockchain.

Passanger Mars Ticket - Tokenomics

Phase 06

Phase 07

1. PMT App Bugs Fix and Upgrade
2. Web 3.0 payment
3. Establishment of centers for needy People
4. Launch Blockchain
5. Objectives and use the for more international contracts

Passenger Mars Ticket Goals

What is the end goal for Passenger Mars Ticket? As stated throughout this whitepaper, we want a community that's enthusiastic, engaged, and having fun while interacting with the Token ecosystem. Our goals are simple:

1. To contribute to the overall cryptocurrency community in demonstrating the viability of Crypto as a legitimate, global currency.
2. To build a marketplace where legal commodities can be sold and traded using PMT Tokens.
3. Have fun! If you can't have fun with what you're doing, then why are you doing it?

Although we take cryptocurrency very seriously why not build relationships while enjoying the journey?

Participation

- ✓ Individuals can participate in the Passenger Mars Ticket ecosystem by becoming the original owner of the virtual currency through contributions to the IEO
- ✓ Users can obtain PMT through the purchase of virtual currency on various digital currency exchanges. (available changes may be announced at a later time).
- ✓ Owners who do not have virtual coins can borrow virtual coins from virtual currency owners on a temporary basis to access the PMT discount

Passenger Mars Ticket may be forced to shut down or take actions that resulted in the Dissolution Event
